Portfolio

Information Sciences & Technology senior (Dec 2026, available January 2027) who turns slow, manual processes into automated data and AI tools, from AI agents and data quality controls to financial models. Seeking new-grad roles in data, AI, operations, and product at financial services firms.

EDUCATION

Penn State Harrisburg – College of IST — Middletown, PA
B.S. in Information Sciences & Technology | *Concentration: IT Integration & Application* | *GPA: 3.00* — Dec 2026

SKILLS

Technical: SQL, Python (Pandas, NumPy, PySpark), Microsoft Excel, Power BI, DAX, Microsoft Fabric, FastAPI, React, Git/GitHub, Salesforce, Claude API, Claude Code

Analytical: Data Quality Controls, Validation Testing, Pro Forma Modeling

Licenses/Certifications: PA Real Estate License, Google Data Analytics

Awards: Penn State Harrisburg 2026 Commencement & Convocation Speaker, Lumen Business Impact Award (AI in Action), Nittany Excellence Leadership Award

WORK EXPERIENCE

Lumen Technologies — Remote
Marketing Operations Reporting Analyst Intern — May 2026 – Aug 2026

- Designed and launched an AI agent in Microsoft Fabric for marketing funnel analysis, validated by replicating a senior analyst's prior project and reaching the same conclusion in **2 hours instead of 12**; won Lumen's **Business Impact Award**.
- Prevented **1,000+ bad records** from reaching dashboards by engineering a PySpark data quality framework with **8 daily validation checks** on the semantic model's gold layer, screening hundreds of thousands of funnel records.
- Developed the semantic model and DAX measures in **Microsoft Fabric** for a **Power BI** funnel report that informed a recommendation to leadership to adjust Lumen's customer request page.

Midtown Property Management — Harrisburg, PA
Real Estate Operations Analyst (Part-time) — Feb 2026 – Present

- Automated landlord-tenant court filings in **Aptly CRM** with merge fields and district dropdowns for all 14 county courts, preparing **7 complaints in about an hour** instead of a week.
- Modeled 5+ single-family and multifamily properties in **Excel pro formas**, including **fix-and-flip deals** for 3 private clients, projecting rents, expenses, rehab costs, ARV, and ROI from rent roll and sales comps to support buy, hold, or pass decisions.

Unite Us — Remote
Digital Customer Success Intern — Jun 2025 – Aug 2025

- Developed a Python model scoring **375+** Salesforce accounts on upsell likelihood using association metrics (lift, confidence, similarity), surfacing **217 high-probability opportunities** and presenting the findings to Customer Success leadership to guide targeting.

KEY PROJECTS

N-CORE – Quantitative Trading Research Platform — May 2026 – Aug 2026

- Ran about **2,400 backtests** of 9 strategy families across a 298-ticker universe, using walk-forward validation to reject overfit results and narrow the field to **43 validated pairs**, on a full-stack research platform (FastAPI, React) deployed on Railway.
- Engineered AI agents on the Claude API that pull live market data from Yahoo Finance and high-impact economic events from Forex Factory to generate automated research memos and flag macro risk.
- Piloted with **5 users** and shipped their top requests, Telegram alerts (about **6.5 chart signals a week**) and 5-minute chart refreshes, while grading every signal in a live ledger against backtest results.

LEADERSHIP & ORGANIZATIONS

National Society of Black Engineers (NSBE) – President — Jan 2025 – May 2026

- Revived a dormant chapter, growing active membership from **7 to 29** by rebuilding it around career development.
- Raised **$11,000** in one semester by pitching directors across three academic schools and presenting to advisory boards, funding employer events and the chapter's trip to the NSBE national convention.
